## EXPERIENCE

### TELUS Digital

Washington, DC

Applied AI Researcher

July 2025 – July 2026

- First-author paper (under review, NeurIPS 2026) on the representation geometry of multi-turn LLM jailbreaks across 3 open-source models, providing evidence for why single-turn safety filters underperform against multi-turn jailbreaks.
- Prototyped an adaptive multi-turn attack framework for Fuel iX Fortify, an enterprise AI red-teaming platform, that adapts to the target over the course of a conversation and dynamically selects effective attack strategies.
- Developed a methodology for measuring consistency of the LLM-based evaluator behind Fuel iX Agent Trainer and delivered a research implementation package for engineering team, leading to a 2x improvement in evaluation stability.

### TELUS Digital (formerly WillowTree)

Charlottesville, VA

Applied AI Research Intern

Summers 2021-2023, May 2024 – June 2025

- Designed and implemented a named entity recognition model for automated detection and classification of adversarial attack methods for an LLM red-teaming platform, outperforming a previous ML-based approach.
- Built a perplexity-based output filter that identified 92% of attacks targeting an LLM-based chatbot of a finance company.
- Engineered a benchmarking framework to measure LLM hallucination in knowledge graph-based reasoning tasks.

### Mamsa

Remote, part-time

Head of AI

September 2024 – September 2025

- Led responsible AI strategy for a startup leveraging voice data to monitor cognitive decline in older adults.

### Poatek

Porto Alegre, Brazil

Data Science Intern

Summers 2021 – 2022

- Built, trained, and evaluated a VGG-LSTM visual-language model to generate reliable radiology reports from X-ray scans.
- Applied PEFT methods to optimize trainable parameters a visual-language model, reducing training time by 50%.
- Used causal inference algorithms to research how students' socioeconomic factors affect education outcomes in Brazil.

## EDUCATION

### UCL

London, UK

MSc in Computational Statistics and Machine Learning

September 2026 – September 2027

### Minerva University

San Francisco, CA

BSc in Data Science and Statistics with Minor in Economics

September 2021 – May 2025

- Thesis project on detection of LLM system prompt leaks featured at [NeurIPS 2025 AI Education Showcase](#)

## PROGRAMS & COURSES

- **ML4Good Bootcamp** – Technical AI Safety Track
- **Cambridge AI Safety Hub** – UK AI Policy Course

Midlands, UK (September 2026)

Cambridge, UK (July – August 2026)

## SKILLS

- **Languages and tools:** Python, R, SQL, PyTorch, Transformers, Keras, HuggingFace, MLFlow, CUDA/GPU, Numpy.
- **LLMs:** LLM red-teaming, representation engineering, fine-tuning, benchmarking & evaluation, LLM-as-a-judge.
- **ML:** (un)supervised learning, classification, regression, hyperparameter tuning, CV, NLP, embeddings.
- **Statistics:** causal inference, Bayesian statistics, data analysis and visualization, dimensionality reduction.
- **Research and communication:** academic/technical writing, cross-functional collaboration, experimental design.

## PUBLISHED WORK

- Prompt Optimization and Evaluation for LLM Automated Red Teaming ([arXiv Preprint](#), 2025)
- Series of technical blog posts on LLM red-teaming: (1), (2), (3) (TELUS Digital, 2024-2025)
